

The box plot displays the distribution of network types for the top 1000 networks. The x-axis categories are Cable, Other, Satellite, Fiber, Unspecified, and Fixed Wireless. The y-axis represents the number of networks, ranging from 0 to 1000. The plot shows that Satellite and Fiber networks have the highest counts, with Satellite having the most outliers.

A scatter plot showing the relationship between 'miles_per_location' (x-axis) and 'jobs_per_location' (y-axis). The x-axis ranges from 0 to 800, and the y-axis ranges from 0.0 to 20.0. The data points are categorized by network type, as indicated by the legend:

- Cable (Purple)
- Fiber (Blue)
- Fixed Wireless (Green)
- Other (Grey)
- Satellite (Orange)
- Unspecified (Dark Grey)

The plot shows a high density of points near the origin (0 miles_per_location, 0 jobs_per_location). There are several points for Satellite and Unspecified network types at low miles_per_location but high jobs_per_location values (up to 20.0). Fiber points are scattered at various distances, with one notable point at approximately 780 miles_per_location and 0 jobs_per_location.
